Cycling
WEEKLY

**HIGHLY
RECOMMENDED**

WE'VE seen wax lubes before but this one has finally delivered where others have failed. When applied to a clean, dry chain, the water-based carrier ensures that the wax reaches all moving parts while leaving a dry chain afterwards. Even in the wettest of conditions, the lube kept the chain moving freely and did not wash off like others have a tendency to.

Reapplication was only necessary once or twice a week based on riding each day, although wet conditions would make it more necessary. We asked if this lube was the Holy Grail of chain lubes and it would certainly seem to be the closest we've come. BW
